

## When Creativity Meets Technology

Interactive LED floor display is always the perfect choice to grab the attention of customers or audience. The ingenious combination of creativity and technology can bring unexpected effects to an event.

Uniview will showcase the industry-leading interactive floor display - I series. It aims to provide a truly immersive experience for users. With the built-in interactive system and 64 touch points in each cabinet, response time is reduced to less than 0.1s, enabling users to enjoy the fun of real-time interaction.

Next to the advanced interaction technology, I series is also easy to service. With the magnetically fixed module design, which greatly decreases service time and improves work efficiency, module can be easily replaced within 3 seconds.

Excellent product can stand the test of time and different projects. Uniview I series has been widely applied to many projects, including the digital basketball court in Shanghai (China) Nike flagship store, Intel CES 2018 Opening and Kazakhstan Voice of Astana.
